Abdominal Ultrasound How Why And

An abdominal ultrasound is done to view structures inside the abdomen. It's the preferred screening method for an abdominal aortic aneurysm, a weakened, bulging spot in the abdominal aorta — the major blood vessel that supplies blood to the body. However, the imaging test may be used to diagnose or rule out many other health conditions.

Abdominal Ultrasound: How, Why and When 2nd (second ...

Ultrasound technology allows quick visualization of the abdominal organs and structures from outside the body. Ultrasound may also be used to assess blood flow to abdominal organs. Ultrasound uses a transducer that sends out ultrasound waves at a frequency too high to be heard. The ultrasound transducer is placed on the skin, and the ultrasound waves move through the body to the organs and structures within.
