Coconut and other perennial crops are often intercropped with multiple rows of annual crops like corn and pineapple. This is a common practice of maximizing the use of vacant interrow spaces when the main crop has not fully developed thus allowing sufficient light exposure.

Agricultural engineers improve on ways to reduce crop loss from field damage during handling, sorting, packing and processing.

Warehousing of food and fibre are an important part of the agriculture industry; the agricultural engineer plans the heating, cooling, ventilation, post harvest handling, logistics and more.
