Graphene quantum dots (GQDs) are composed of a few layers of graphene fragments, typically less than 10 nm in size. The absorption of these nanoparticles occurs in the UV region (230–300 nm) ( Song et al., 2014 ), which is not favorable for cellular imaging, but it is possible to use also the NIR region for two-photon excitation ( Li et al ...

Graphene quantum dots (GQDs) are nanoscale structures of graphene having strong quantum property and edge effects resulting in exceptional photoluminescence properties. The quantum confinement effect and different nature and density of sp<sup>2</sup> sites in the structure of GQDs make their optical characteristics critically dependent on their structure size.

### Graphene Quantum Dot - an overview | ScienceDirect Topics

Graphene quantum dots ( GQDs) are graphene nanoparticles with a size less than 100 nm. Due to their exceptional properties such as low toxicity, stable photoluminescence, chemical stability and pronounced quantum confinement effect, GQDs are considered as a novel material for biological, opto-electronics, energy and environmental applications.

Graphene quantum dots (GQDs) hold great promise for applications in electronics, optoelectronics, and bioelectronics, but the fabrication of widely tunable GQDs has remained elusive.

### Quantum Dots in Graphene Nanoribbons | Nano Letters

Pristine graphene quantum dots and graphene oxide quantum dots are synthesized by chemical exfoliation from the graphite nanoparticles with high uniformity in terms of shape (circle), size (less than 4 nm), and thickness (monolayer). The origin of the blue and green photoluminescence of GQDs and GOQDs is attributed to intrinsic and extrinsic energy states, respectively.

Quantum dots Nanoparticles of semiconductors (quantum dots) were theorized in the 1970s and initially created in the early 1980s. If semiconductor particles are made small enough, quantum effects come into play, which limit the energies at which electrons and holes (the absence of an electron) can exist in the particles.
