ASSESSING HAIL

DAMAGE Accurate

assessment of hail

damage is a step by

step process that

involves an

examination of the roof

shingles as well as

other objects on and

around the roof.

Marshall and Herzog

(1999) presented a

methodology on how to

quantify hail damage

to a roof through the

use of test squares.

Composition Roof

Damage

Assessment

Guide

The granules are the wearing surface for the roofing and the loss of granules from asphalt shingles is expected over time. But what role does hail play? As noted within the pages of Haag's Composition Roofs Damage Assessment Field Guide, the short answer is that, yes: the impact of a hailstone may dislodge granules from the shingle.
