Therefore, when solving quadratic equations by factoring, we must always have the equation in the form " $(\text{quadratic expression}) = (\text{zero})$ " before we make any attempt to solve the quadratic equation by factoring. Returning to the exercise: The Zero Factor Principle tells me that at least one of the factors must be equal to zero.

Solving Quadratic Equations by Factoring | Purplemath

To solve this, you would use the zero product property. If you make one of the parentheses equal to zero then the whole left side is equal to zero (because zero multiplied by anything is zero). So you'd set the first set of parentheses like so:

1. Solving Quadratic Equations by Factoring

Solving Quadratic Equations Using

Factoring To solve an quadratic equation using factoring : 1 .

Transform the equation using standard form in which one side is zero.

2 . Factor the non-zero side. 3 . Set each factor to zero (Remember: a product of factors is zero if and only if one or more of the factors

This page will try to solve a quadratic equation by factoring it first. How does this work? Well, suppose you have a quadratic equation that can be factored, like $x^2 + 5x + 6 = 0$. This can be factored into

$(x+2)(x+3) = 0$. So the
