#### Thinking About Dementia

Dementia is not a normal part of aging. It includes the loss of cognitive functioning — thinking, remembering, learning, and reasoning — and behavioral abilities to the extent that it interferes with a person's quality of life and activities. Memory loss, though common, is not the only sign of dementia.

#### Memory, Forgetfulness, and Aging: What's Normal and What's ...

Dementia describes a group of symptoms affecting memory, thinking and social abilities severely enough to interfere with your daily life. It isn't a specific disease, but several different diseases may cause dementia. Though dementia generally involves memory loss, memory loss has different causes.

#### Dementia - Symptoms and causes - Mayo Clinic

Sight loss and dementia. Many people have some sight loss as they get older. This may be age-related, or due to a condition such as cataracts or age-related macular degeneration (AMD). Many people with sight loss will need glasses to help them see. People with sight loss are likely to experience more difficulties as a result of their dementia.

#### Dementia and sensory impairment: communicating | Alzheimer ...

Dementia is not a disease: rather, it's a group of symptoms that affect memory and cognitive ability. It can be a symptom of Alzheimer's, but it can also be a result of something else. Here's how to tell the difference between normal memory loss and dementia, and what to do if you're concerned about Mom or Dad.

#### What's the Difference?: Age-Related Memory Loss vs. Dementia

In the chapter titled "The Golden Hour," Harper takes a philosophical turn, seeking to understand our culture's relationship to dementia by exploring how we see darkness.
