Automatic transmissions use a special type of oil, called Automatic Transmission Fluid, or ATF. This fluid has a number of duties in the transmission, including lubrication, cooling and clutch application. ATF even provides the connection between the engine and transmission, through a hydraulic coupling called a torque converter.

Transmission Fluid Types - Transmasters Auto Care

Brake fluid travels through a series of brake hoses and lines as a hydraulic liquid â€” a fluid moving through a confined space while under pressure. It transfers the force of pushing on the brake pedal to brake calipers or drums to stop the vehicleâ€™s motion. Brake fluid is crucial to the braking system and must perform its duty under exacting conditions.

What are the Types of Brake Fluid? | YourMechanic Advice

Either of the transmissions is fine to use. If you are using a manual transmission, you can look for a fluid that will lubricate your gear and allow smooth shifting. On the other hand, if you are using an automatic transmission, you can use synthetic transmission fluid. Automatic transmission generates a lot of heat.
